MYTV GO+ · STARTER GUIDE

# Your viewing pleasure. On your phone, too.

Install MyTV GO+ on your smartphone or tablet and use your own playlist. This guide covers preparation, model-specific activation and everyday use.

**No streaming services or support for them**
ASAT.NL does not supply streaming services, channel packages or IPTV subscriptions, and does not provide support for them. Ask your provider about channels, playlists, login details or service outages. This guide provides general information about equipment and apps.

## What you need

A smartphone or tablet with internet, the correct app and your own playlist or login details. If you want to use app access through a Xsarius box, keep the box and its model name to hand.

## 1. Install the correct app

**01** Open MyTV GO+ in the App Store on iPhone/iPad or MyTV GO+ on Google Play on Android.

**02** Check the name **MyTV GO+** and install the app. Open it when installation is complete.

**03** Read the on-screen instructions. Complete any registration or activation prompts before adding your playlist.

## 2. Check support through your box

ASAT.NL lists free app access through the **Pure 4+** box. Exact activation steps and conditions depend on your model and software. Check the product information and manufacturer's activation instructions. App activation does not supply channels or a subscription.

**Using another model?**
Do not assume activation is identical. A Xsarius Android box, Linux box and mobile app may have different menus.

Use the links above to avoid confusion with similarly named apps. The app store lists current device requirements.

02 · ACTIVATION & PLAYLIST

# From installation to viewing.

Always follow activation instructions for your box and app version. There is no verified universal button sequence for all Xsarius models.

## 3. Complete model-specific activation

**01** Switch on the box, connect it to the internet and find the activation instructions for your model. Open the MyTV GO+ feature specified in those instructions.

**02** Follow registration or linking instructions on the TV and in the mobile app. **If your instructions show a QR code:** use the specified scanning feature. Grant camera access only when you want to scan the code.

**03** Check that the app or box confirms successful registration or activation. If the feature is missing or an error appears, consult the manufacturer or app developer. Contact your service provider for problems with your streaming service.

**No activation option visible?**
Do not use random activation codes or instructions for another brand. Consult the manufacturer or app developer for the correct activation process. This guide cannot replace the instructions for your specific model.

## 4. Add your own playlist

If your source was not transferred during linking, open the option to add a playlist or source. The app supports the three types below. Use the type supplied by your provider.

| | |
|---|---|
| **M3U** | Enter the complete playlist link, or use a file if the app offers that option. |
| **XC** | Enter the server address, username and password exactly as supplied. |
| **Stalker** | Use the portal address and any additional details requested by your provider and the app. |

Save the source and wait for it to load. Then open an available channel or title. If it does not work, check spaces, capital letters and the full address. Ask your provider whether mobile use and an additional device are allowed.

ASAT.NL does not supply streaming services or provide support for them.

# Ready to watch.

The sections and features available depend on your playlist, provider and app version.

## Using the app

Open your loaded playlist, choose an available category and tap a channel or title. Tap the picture during playback to show the controls. Use search or favourites if your screen offers them.

| | |
|---|---|
| **App active, no channels** | Add a working playlist of your own. App activation alone does not provide channels. |
| **Login failed** | Check the source type and your details. Ask your provider whether your account is active. |
| **QR code not working** | If your model uses QR linking, check camera access and follow its specific scanning instructions. |
| **Buffering** | Try a stable WiFi connection and another channel. Check whether other devices have the same problem. |
| **Box works, phone does not** | Check whether your provider allows another device, simultaneous streams or viewing away from home. |

**Mobile data and privacy**
Video can use a lot of mobile data. Use WiFi if you want to limit usage. A playlist link may contain login details; do not share it in screenshots or public messages.

**Help with equipment**
For purchasing, connecting and operating your Xsarius equipment:
WhatsApp or call **+31 475 407 278** · Open WhatsApp
ASAT.NL · xsariusbox.nl
For streaming services, channels, playlists and login details, contact your provider.
ASAT.NL does not provide support for these.

## About this guide

ASAT.NL starter guide, October 2026. Based on app store listings and ASAT.NL product information. For exact activation menus, follow your model's instructions.
